

Single Axis Robot

KKP series

Linear Module

General Overview

Warning

Single Axis Robots have both electrical and mechanical components, for safety, please read and follow all of the related precautions before selection and use. ALM is not held responsible for any malfunctions, damages, or accidents caused by the misuse of the product.

Personal Safety

- Single Axis Robots are designed for industrial purposes only.
- During operation, the users should stay clear of the Single Axis Robots mechanical range of motion to avoid possible injury.
- When the motor power is ON, people with pacemakers should keep away at least one meter to avoid any disturbance.
- To prevent fires, Single Axis Robots should not be placed near the ignition of flammable gases.

Storage and Installation

- Avoid any possible collisions or dropping of the product.
- When storing, it is recommended that the product be well packed and laid down flat. Do not expose the product to hot, cold or humid conditions.
- Do not disassemble or modify the products to avoid possible malfunctions or accidents.
- During installation, ensure the product is fixed correctly to avoid any loosening caused by vibrations.
- Take care when selecting the correct coupling and motor hardware for installation and be aware of the alignment to the centerline of the shaft when tightening the screws. Do not force the install.

Operation

- The operation conditions need to be within the rated values as shown in the technical information.
- Avoid dust, debris and any foreign objects from entering the ball return system.
- Operational temperature should be under 80 °C. In high temperature environments above 80 °C, please contact ALM sales.
- Confirm first with ALM sales if the product can be used in a special environment, such as vacuum, vibration, clean room, corrosive chemicals, organic solvents, extreme high or low temperatures, humidity, liquid splashes, oil drops or mist, high salt, heavy load, vertical or cantilever installations.
- For vertical installations, when loaded, there is a possibility that the slider may fall. We recommend to adding proper braking and ensure functionality before operation.

Maintenance

- Lubricate the product before the initial use. Note the type of grease used and avoid mixing different types together.
- For normal operating conditions, it is recommended to check the operation every 100km, clean and supply grease onto the rail and shaft.

Linear Module

ALM KKP Single Axis Robot is driven by a ballscrew while a guideway slides on an optimized U-rail to achieve higher accuracy and greater stiffness.

Features

- An integrated system
- Easy installation and maintenance
- Compact and lightweight
- High accuracy
- High stiffness
- Complete line of accessories

Linear Module

KKP

Modulization

The KKP Single Axis Robot integrating a ball screw and guideway forms a modularized product. The modularized design can help customers save time, cost and system inspection. Therefore, installation efficiency and a space-saving design are also promoted.

Equivalent Load

The gothic arch contact design sustains load from all directions and offers high rigidity and accuracy.

High Stiffness

Using finite element analysis on the U-shaped cross section allows the volume and rigidity to be made balanced, therefore, a high rigidity rail, compact design and a light weight design are also accomplished simultaneously.

Model no.	I_x	I_y
KKP40	3.533×10^3	5.317×10^4
KKP50	9.6×10^3	1.34×10^5
KKP60	2.056×10^4	2.802×10^5
KKP86	7.445×10^4	1.134×10^6
KKP100	1.296×10^5	2.035×10^6
KKP130	2.546×10^5	5.073×10^6

I_x : Moment of inertia computed about X axis
 I_y : Moment of inertia computed about Y axis

Various Specification

KKP Single Axis Robots of various specifications are developed, providing customers with different choices relating to space and loading conditions.

Model no.	W	H
KKP40	40	20
KKP50	50	26
KKP60	60	33
KKP86	86	46
KKP100	100	55
KKP130	130	65

Linear Module

KKP

Accessories

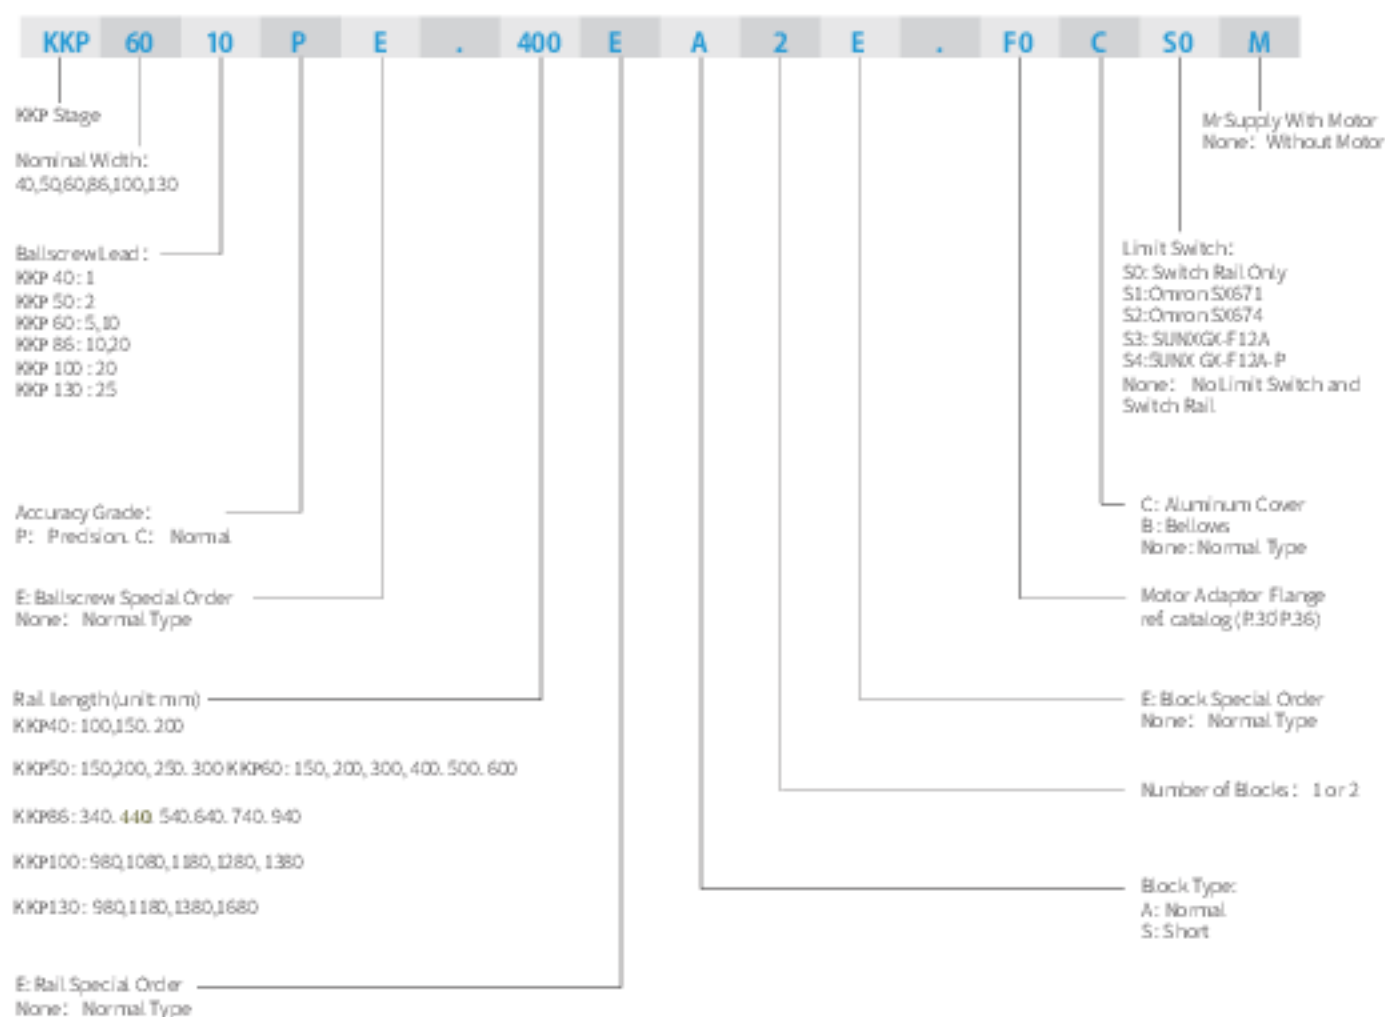

Accessories of KKP Single Axis Robot are also supported for specific demands, such as an aluminum cover, bellows, motor adaptor flange and limit switches.

- Aluminum cover and bellows: contamination protection
- Motor adaptor flange: connection for different types of motors
- Limit switches: starting point, positioning and other safety matters

Linear Module

Life Calculations

Service Life

Under repeated stress between the raceway and the rolling elements, pitting and flaking will occur as it reaches fatigue failure. The service life of the KKP Single Axis Robot is defined as the distanced traveled before any failure of the raceway or rolling elements appear.

Nominal Life (L)

The service life varies greatly even when the KKP units are manufactured in the same way or operated under the same conditions. For this reason, nominal life is used as the criteria for predicting the service life of a KKP unit.

Nominal Life Calculation

The calculating formulas are divided into two parts, guideway and ballscrew. The smaller value of the two would be the recommended nominal Life of the KKP unit.

Nominal life formulas for both the guideway and ballscrew depend on several parameters and are shown below.

Guideway

$$L = \left(\frac{f_t}{f_w} \cdot \frac{C}{P_n} \right)^3 \times 50 \text{ km}$$

L : Life Rating (km)

f_t : Contact Coefficient (ref. Table 1)

f_w : Loading Coefficient (ref. Table 2)

C : Basic Dynamic Load Rating (N)

P_n : Calculated Loading (N)

Table 1

Block Type	Contact Coefficient f_t
A1,S1	1.0
A2,S2	0.81

Table 2

Operating Condition		Loading Coefficient f_w
Operating Condition	Velocity (V)	
No Thrust	$V < 15\text{m/min}$	1.0 ~ 1.5
Low Vibration	$15\text{m/min} < V < 60\text{m/min}$	1.5 ~ 2.0
High Vibration	$V > 60\text{m/min}$	2.0 ~ 3.5

Ballscrew and Bearing

$$L = \left(\frac{1}{f_w} \cdot \frac{C_a}{P_{a,n}} \right)^3 \times 10^6 \text{ rev}$$

L : Life Rating (rev)

f_w : Loading Coefficient (ref. Table 2)

C_a : Basic Dynamic Load Rating (N)

$P_{a,n}$: Axial Loading (N)

Linear Module

Lubrication

Insufficient lubrication of the guideway would lead to a reduction of the service life. The lubricant provides the following functions:

- Reducing rolling friction and avoiding abrasion
- Providing a lubricating film and extending the service life
- Anti-rusting

Lubricating Grease

Re-lubricating the KKP Single Axis Robot every 100km is recommended. Generally, grease is applied for speeds under 60 m/min. For operating speeds over 60 m/min, a grease with a higher viscosity should be used.

$$T = \frac{100 \times 1000}{V_e \times 60}$$

T: Lubricating frequency (hrs)
V_e: Speed (m/min)

Grease Nipple
